Recognition Program
After Action Report

Project Name: SAP Cleaners
Number of Youth participated: 11
Length of Project: 2 Weeks

How did your group/organization choose your service project? Did you identify two or three of the most important environmental needs facing your installation or community? Many chemicals we use to clean our house are harsh for the environment and risky to our health. So we decided to research natural ways to clean up!

Describe challenges, if any, faced during your service project. We had to make sure the items would be child friendly and approved in our programs. We were not able to use the borax.

What resources, skills, or assets did you use to get your service project completed? The children researched the cleaners needed to wash windows, clean surfaces, and fight weeds.

Describe your group's long term goal or purpose in conducting your project? Our long term goal is to motivate families to take this knowledge home with them and to possibly replace some of the center's own cleaners. We were also talking about a possible community service project, where we go and clean for an elderly family or the Spiecher Orphanage.

What does success look like for your project? Can it be measured? Is it attainable? Success will be the implementation of new earth friendly products into our cleaning routine.

Please use additional sheet for comments or suggestions.
